MDK (IgD)

1. MDK

1.1 MDK

MDK (IgD) is a marker of disease activity in children with systemic lupus erythematosus (SLE). It is a type of antibody that is produced by the immune system in response to an antigen. In SLE, MDK is produced in response to the nuclear antigen (ANA). The presence of MDK is associated with disease activity and is used as a marker of disease activity in clinical trials.

1.2 MDK

MDK (IgD) is a marker of disease activity in children with systemic lupus erythematosus (SLE). It is a type of antibody that is produced by the immune system in response to an antigen. In SLE, MDK is produced in response to the nuclear antigen (ANA). The presence of MDK is associated with disease activity and is used as a marker of disease activity in clinical trials.

1.3 MDK

MDK (IgD) is a marker of disease activity in children with systemic lupus erythematosus (SLE). It is a type of antibody that is produced by the immune system in response to an antigen. In SLE, MDK is produced in response to the nuclear antigen (ANA). The presence of MDK is associated with disease activity and is used as a marker of disease activity in clinical trials.

1.4 MDK

MDK (IgD) is a marker of disease activity in children with systemic lupus erythematosus (SLE). It is a type of antibody that is produced by the immune system in response to an antigen. In SLE, MDK is produced in response to the nuclear antigen (ANA). The presence of MDK is associated with disease activity and is used as a marker of disease activity in clinical trials.

1.5 MDK

MDK (IgD) is a marker of disease activity in children with systemic lupus erythematosus (SLE). It is a type of antibody that is produced by the immune system in response to an antigen. In SLE, MDK is produced in response to the nuclear antigen (ANA). The presence of MDK is associated with disease activity and is used as a marker of disease activity in clinical trials.
