CANDLE

1. CANDLE

1.1

CANDLE is a multinational, multi-centre, observational study of children with CANDLE. The study aims to describe the clinical and radiological features of CANDLE, to identify the genetic and environmental factors that influence the disease, and to evaluate the response to treatment. The study is currently recruiting patients from 15 countries. The study is a collaboration between the PRINTO network and the PRES network.

1.2

CANDLE is a multinational, multi-centre, observational study of children with CANDLE. The study aims to describe the clinical and radiological features of CANDLE, to identify the genetic and environmental factors that influence the disease, and to evaluate the response to treatment. The study is currently recruiting patients from 15 countries. The study is a collaboration between the PRINTO network and the PRES network.

1.3

CANDLE is a multinational, multi-centre, observational study of children with CANDLE. The study aims to describe the clinical and radiological features of CANDLE, to identify the genetic and environmental factors that influence the disease, and to evaluate the response to treatment. The study is currently recruiting patients from 15 countries. The study is a collaboration between the PRINTO network and the PRES network.

1.4

CANDLE is a multinational, multi-centre, observational study of children with CANDLE. The study aims to describe the clinical and radiological features of CANDLE, to identify the genetic and environmental factors that influence the disease, and to evaluate the response to treatment. The study is currently recruiting patients from 15 countries. The study is a collaboration between the PRINTO network and the PRES network.

1.5

CANDLE is a multinational, multi-centre, observational study of children with CANDLE. The study aims to describe the clinical and radiological features of CANDLE, to identify the genetic and environmental factors that influence the disease, and to evaluate the response to treatment. The study is currently recruiting patients from 15 countries. The study is a collaboration between the PRINTO network and the PRES network.
